# Homework for chapter 7

You are provided with *index.html*, *style.css* in css folder, and images in assets folder. You must not make any changes to the *index.html* file, in fact the file that you will send me for this project is **style.css**. The only information about colors that you need to know is for upper part of header (notice that h1 and img are elements inside header element) and the footer, use #aaaaaa;

Add necessary styles in the *styel.css* file in order to make the page look like:

This is an abstract wireframe for this project

Other requirements:

- The webpage must be fluid.
- Place the three <article> inside the <main> element side by side as shown. They must be divided in three equal columns.
- Pay attention to how everything is aligned in center. How the <input> elements are aligned and have the same width (except the button).
